

Lecture Recap

Money Market

► Money demand $M^d(Y, i)$

$$M^d = \$Y \times L(i)$$

where $\$Y = PY$ and $\frac{dL}{di} < 0$.

Lecture Recap

Money Market

- ▶ Money demand $M^d(Y, i)$

$$M^d = \$Y \times L(i)$$

where $\$Y = PY$ and $\frac{dL}{di} < 0$.

- ▶ Money supply $M^s = M$ governed by the Reserve Bank.

Lecture Recap

Money Market

- ▶ Money demand $M^d(Y, i)$

$$M^d = \$Y \times L(i)$$

where $\$Y = PY$ and $\frac{dL}{di} < 0$.

- ▶ Money supply $M^s = M$ governed by the Reserve Bank.
 - ▶ Open market operations: buying/selling bonds.

Lecture Recap

Money Market

- ▶ Money demand $M^d(Y, i)$

$$M^d = \$Y \times L(i)$$

where $\$Y = PY$ and $\frac{dL}{di} < 0$.

- ▶ Money supply $M^s = M$ governed by the Reserve Bank.
 - ▶ Open market operations: buying/selling bonds.
 - ▶ expansionary: RB buying bonds, pay with money \implies increase money supply.

Lecture Recap

Money Market

- ▶ Money demand $M^d(Y, i)$

$$M^d = \$Y \times L(i)$$

where $\$Y = PY$ and $\frac{dL}{di} < 0$.

- ▶ Money supply $M^s = M$ governed by the Reserve Bank.
 - ▶ Open market operations: buying/selling bonds.
 - ▶ expansionary: RB buying bonds, pay with money \implies increase money supply.
 - ▶ contractionary: RB selling bonds, receives money \implies decrease money supply.

Lecture Recap

Money Market

- ▶ Money demand $M^d(Y, i)$

$$M^d = \$Y \times L(i)$$

where $\$Y = PY$ and $\frac{dL}{di} < 0$.

- ▶ Money supply $M^s = M$ governed by the Reserve Bank.
 - ▶ Open market operations: buying/selling bonds.
 - ▶ expansionary: RB buying bonds, pay with money \implies increase money supply.
 - ▶ contractionary: RB selling bonds, receives money \implies decrease money supply.
- ▶ Money Market Equilibrium condition:

$$M^s = M^d \Leftrightarrow M = PY \times L(i)$$

Lecture Recap

Money Market

- ▶ Money demand $M^d(Y, i)$

$$M^d = \$Y \times L(i)$$

where $\$Y = PY$ and $\frac{dL}{di} < 0$.

- ▶ Money supply $M^s = M$ governed by the Reserve Bank.

- ▶ Open market operations: buying/selling bonds.
 - ▶ expansionary: RB buying bonds, pay with money \implies increase money supply.
 - ▶ contractionary: RB selling bonds, receives money \implies decrease money supply.

- ▶ Money Market Equilibrium condition:

$$M^s = M^d \Leftrightarrow M = PY \times L(i)$$

- ▶ Leverage ratio = Asset / Equity.
